Math 250Q  Spring 2019

Instructor: Fang Chen, Office: Pierce 130, Phone: 770-784-4639, e-mail: fchen2@emory.edu

Office hours: To be announced on Canvas

Textbooks:

D. Velleman, *How to Prove It.*

Handouts, and excerpts from other texts will be used.

Course Content: Mathematics 250 is a survey of basic mathematics with a focus on proving. The course will cover elements of the propositional calculus, the predicate calculus, and techniques of proof (including mathematical induction); sets and the set-theoretical development of basic mathematical objects (relations, functions, operations); and brief introductions to the fields of combinatorics, number theory, group theory, and analysis.

Course Goals: The overall goal is to prepare the student for higher mathematics as well as possible in a semester.

At the end of the course, the student should achieve the following process goals: to read and apply a complicated definition; to produce an example of a thing defined; to read and understand proofs; to understand what needs to be proved in a statement; to apply various strategies for proving a statement; to create simple proofs; to write a proof cogently. And the student should achieve the following content goals: to understand the propositional and predicate calculi; to know the basic definitions in the fields of set theory, number theory, group theory, and analysis.

Attendance/Quizzes/Class Participation: Students are expected to attend all classes and are responsible for all materials covered in class as well as any changes made in the schedule.

The course is student-centered and inquiry-driven. Before class, students are expected to study assigned materials, take notes and try to understand most of the basic definitions, examples and concepts. Sometimes a pre-lecture quiz will be given to evaluate how well a student is prepared for class. Students are expected to bring to class a list of questions and thoughts relevant to the topics to be discussed.

Students should actively participate in class-discussions. Being absent, late, inattentive or inactive will lead to deductions to one’s class participation grade. Attendance and consistent preparation for class will determine the success or failure the student realizes in this course.

Coursework: Problems will be assigned and collected for credit. To receive full credit the work must be correct, well-written, and done alone; the student will have the opportunity to revise their work until it is correct and well-written, once a week for several weeks (deadlines will be assigned to each problem). Problems and revisions are due each Monday. The problems are the major component of the course. Students may not always receive the same problems.

Homework exercises will be assigned. These are for the benefit of the student.

Sometimes the student will have to prepare a proof for presentation in class.

Examinations: Two midterm examinations will be given outside class. They will be given around late February and early April. They will be administered at a time convenient to both the instructor and the students. A cumulative final examination will be given at the time scheduled by the Registrar.
Grading: Grades will be based on the problems collected for credit (40%), the final examination (20%), two midterm examinations (20%), quizzes (10%) and class participation (10%). These percentages are approximate. Each student’s work will be judged in relation to the goals set for the course.

Outline of the Course: Approximately four weeks will be spent on chapters I and II of Landau’s Foundations of Analysis and on chapters 1–3 of How to Prove It. Next approximately four weeks will be spent on chapters 4–7 of How to Prove It and a week and a half will be spent on the ring of integers. The last three weeks will be spent on chapters III through V of the Foundations of Analysis and topics in analysis and algebra.

The Honor Code of Oxford College applies to all work submitted for credit in this course. By placing your name on such work, you pledge that the work has been done in accordance with the given instructions and that you have witnessed no Honor Code violations in the conduct of the assignment.

This is particularly important for the problems: The only permitted references are listed on this syllabus under Textbooks (including the handouts and excerpts). In particular, no internet resources are permitted. One may not discuss the problems except with the instructor.
